Osaka/Kansai EXPO 2025 - We Are Participating

We are proud to announce that we will exhibit at the Osaka Healthcare Pavilion Reborn Stage of Osaka/Kansai Expo 2025 to be held in Yumeshima, Osaka, under the theme of “Designing Future Society for Our Lives.” We have decided to exhibit our technology of BNCT (Boron Neutron Capture Therapy), an innovative cancer treatment from Osaka/Kansai, which leads the world in BNCT* research.

The Osaka Healthcare Pavilion aims to show the wisdom and innovation of Osaka about “life” and “health,” and how this will evolve in near-future lifestyles. Visitors will be deeply impressed and inspired to take new action through experience and co-creation.

Osaka in the Kansai Area combines universities, companies, medical institutions and specialists involved in BNCT. Through videos and other exhibitions, we will present to domestic and international visitors how BNCT opens the way to the “Future Society with Shining Lives.” We kindly invite you to visit us at the “Reborn Stage” of the Osaka Healthcare Pavilion.

*BNCT (Boron Neutron Capture Therapy): Radiation therapy that combines a boron-containing drug and neutron irradiation as new cancer treatment. High effectiveness and minimal damage to the body are expected.
